

# FUMIGATION SHEETING

Power Plastics, based in Ottery, Cape Town, was recently approached to manufacture an urgent order of 28,000 square meters of sheeting used for fumigation.

Manufactured from 200 micron polyethylene plastic sheet, the entire order was completed within a week.

With enough plastic sheeting to cover any major sports stadium in Africa and containing 5.5 kilometers of welding, this clearly demonstrates the company's ability to perform to world class standards, manufacture in volume and to deliver on time!

With floor space of 1100 meters available to allow the production of such large sheets, coupled with skilled and experienced staff, Power Plastics was able to meet the customers need for urgent delivery.

Says GM, Stephen Doyle, "This was amazing, showing how the team can rise to the challenge, meet quality and time constraints and deliver a fantastic product and service."

Power Plastics is a wholly South African owned company which specializes in the manufacture and supply of container liners for the dry bulk transportation business. It also specializes in the manufacture of covers in Polyethylene, Polyprop, PVC and thermal materials.
